

STILINGUE - Integrating solutions with Google Workspace

STILINGUE counts on SantoDigital's differentiated and premium services, such as technical support offered by a certified and specialized team that is always ready to support the integration processes carried out in STILINGUE's environment.

The challenge

Facilitate the team's onboarding process, increase the security of the environment, have an integrated and simple-to-use tool allowing the entire company to work remotely.

The solution

Google Workspace allows greater control over the environment and brings simplicity to certain actions such as adding new users to the dashboard. Allows employees to work remotely and safely and fully integrated with other solutions, in addition to the ease of sharing files between teams with the possibility of simultaneous editing, facilitating the management of employees.

The results

Melhor comunicação entre equipes e gestão de arquivos centralizada nos Drives de Compartilhados. Melhora na integração entre aplicações devido a facilidade de desenvolvimento dentro do Google Workspace e simplicidade na migração do trabalho presencial para o remoto devido a pandemia da COVID-19.

“We have complete confidence in the platform and we are able to get into remote work without any difficulty due to the use of Google Workspace and we realized that, with the use of Google Cloud technologies, we were able to implement solutions that do not create friction with our users”

Marcos Han, Especialista em Segurança da Informação na STILINGUE.

STILINGUE
