

SEMED Gaspar

Our role in the project was to carry out the implementation of the administrative panel and the users' accounts for teachers, students and staff. We also designed and carried out PD training with the whole district, including students.

The challenge

The pandemics arouse the urgency of promoting digital literacy among teachers and school managers in Gaspar, in order to keep education going on in the city, in spite of the social isolation. It was also a challenge to modernize internal processes in the District, as a whole, and in schools, as well as promote new ways of teaching and learning.

The solution

We've started our project by providing entire support and deployment of Google Workspace for Education. This encompasses the Admin Console policies setup, creation and update of users accounts, including students, teachers and staff. Otherwise, we kept in touch with the customer to help them about how their staff could be more productive using GWFE tools to organize and make their process digital.

The results

During this partnership, we have been achieving some goals such as changing some internal processes to be faster and more effective, cutting the time of IT Management and implementing a new mindset about how the staff see the data and how they could use it to make decisions. Regarding the pedagogical scope, 465 teachers and 52 students were certificated in our training.

“Thanks to the partnership with Colaborativa, we promoted not only a digital transformation, but a transformation in our culture. Our teachers are now enthusiastic about the power of Google Workspace for Education tools in their classrooms, thanks to the pedagogical expertise of the specialists from Colaborativa”

Emerson Antunes - Education Secretary from Gaspar

About SEMED Gaspar

This program encompasses actions which go from technical to pedagogical support and the implementation of Google Workspace for Education tools for managers, teachers, staff and students. We also carried out training sections considering the specific context of each sector of the District and the educational level the teachers worked with.

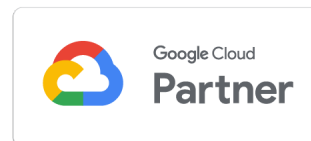

Industry: Education

Primary project location: Brazil
