# Oakbrook Finance is personalizing CX using Google Cloud, MongoDB,

Using Google Cloud, MongoDB, Databricks, and Fivetran, Oakbrook created a modern scalable platform and now offers personalized financial solutions to individual customers using cutting edge technology and data and analytics.

## The challenge
Oakbrook struggled with having insufficient data storage and scaling its infrastructure so workloads wouldn't slow down and maintain its development time.

## The solution
Together with Google Cloud, MongoDB, and Databricks, Fivetran played a critical role in data movement and brought data from different operational systems to one place. We removed bottlenecks for the data engineering team.

## The result
Oakbrook is making decisions 30% faster, getting offers back to customers within 10 seconds.
