How Sensire Accelerated Cloud Migration with Dataddo

Dataddo was integral to Sensire's migration to Google Cloud, enabling automatic syncing of data from proprietary healthcare software to BigQuery. Their universal JSON connector facilitated rapid integration, avoiding the lengthy development of custom

The challenge

Sensire aimed to migrate its diverse data infrastructure to Google Cloud for enhanced analytics but faced the complexity of integrating niche healthcare data sources. The challenge was to centralize data in BigQuery with minimal disruption and time investment, shifting from on-premise to a cloud-based, real-time analytics model.

The solution

In collaboration with Google Cloud, Dataddo provided Sensire a seamless data integration solution. Utilizing Dataddo's universal JSON connector and rare pre-built connectors for niche applications, Sensire could rapidly funnel data into BigQuery. This synergy enabled frequent, automated updates for analytics in Looker, aligning with Sensire's strategic shift to Google's tool suite.

The result

The Dataddo-Google Cloud solution delivered substantial efficiencies: three weeks of work saved during migration and up to three man-days monthly post-migration. Sensire established BigQuery as a single source of truth, ensuring that data-driven decisions are made with the most current data, enhancing patient care and operational performance.

> " We supplied Dataddo's support team with the datasets, and the sources were available within a few days. When we needed modifications later, they implemented them quickly. "
>
> Jan Willem Tiemessen, Head of Data Analytics & Robotics at Sensire

About Sensire

Sensire is a Dutch healthcare company with a strong history of providing outstanding care to clients in their own homes, as well as in nursing facilities. Founded in 1950, it is a large organization with a data infrastructure that has been evolving since the early days of big data. But, until recently, the infrastructure was on-premise, which made
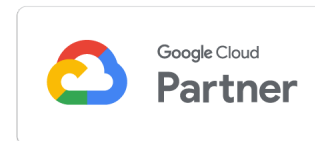

Vertical/horizontal solution: Healthcare & Life Sciences

Primary project location: Netherlands

About Dataddo Inc.

Dataddo offers 300+ connectors for seamless ETL to Google BigQuery and Cloud SQL, plus reverse ETL and DB replication.
