Neredekal.com modernizes its infrastructure with Google Cloud

Neredekal.com has partnered with Oredata to modernize its infrastructure by using Google Cloud. This partnership allows Neredekal.com to take advantage of the scalability, reliability, and security offered by Google Cloud's technology.

The challenge

The tourism industry faces a unique challenge during the holiday season and special days when it comes to scalability. With the increased demand for travel and vacation packages, companies must have a scalable infrastructure in place to handle the increased load. Proper planning and preparation are key to ensuring a seamless experience for users during these busy times.

The solution

Neredekal.com used Google Cloud's Load Balancers, Compute Engine, and Kubernetes to solve scalability and reliability challenges during peak periods. Compute Engine provided a scalable and highly available infrastructure for the website. Kubernetes was used to manage and orchestrate the deployment of applications on Compute Engine, allowing for easy scaling and updates without downtime.

The results

The implementation of Google Cloud's Load Balancers, Compute Engine, and Kubernetes helped neredekal.com increase scalability, improve user experience, and handle more users during peak periods. This led to increased user satisfaction and loyalty. The use of these tools allowed neredekal.com to take advantage of the power and flexibility of the cloud.

> " We at neredekal.com are thrilled with the solution provided by Oredata and Google Cloud. Google Cloud's powerful tools have been instrumental in helping us solve our scalability and reliability challenges, and it has allowed us to provide a better experience for our users. We have been able to handle more users during peak periods, increase our efficiency, and improve the overall performance. "
