FinaryLabs leverages Google Cloud to Deliver Blockchain Solutions

FinaryLabs has partnered with Oredata to host their blockchain infrastructure in Google Cloud. This partnership will allow FinaryLabs to leverage the scale, reliability and security of Google Cloud's infrastructure.

The challenge

Hosting a blockchain platform on an on-premises datacenter requires a significant investment in hardware, software, and infrastructure, as well as ongoing maintenance and support to ensure that the platform remains secure, available, and scalable. Blockchain technology requires secure and reliable systems to ensure the integrity and confidentiality of data.

The solution

FinaryLabs used Google Cloud Kubernetes and Compute Instance Groups to address scalability, and also used Google Cloud Security solutions to ensure security. Kubernetes allowed them to deploy and manage applications in a flexible and scalable manner. Google Cloud Security solutions provided additional protection against threats such as malware, hackers, and data breaches.

The results

The collaboration between FinaryLabs and Google Cloud has resulted in a highly scalable and secure blockchain platform that is able to meet the growing demand for their products and services. By leveraging Google Cloud's infrastructure, FinaryLabs has been able to ensure that their systems are always available and perform at their best, even as demand for their services increases.

> " The combination of Google Cloud's reliable and scalable infrastructure with Oredata's expertise in cloud has resulted in a powerful and effective platform for hosting our blockchain applications. The use of Google Cloud Compute has allowed us to easily scale our systems to meet the growing demand, and Google Cloud Security Solutions have given us confidence that our platform is secure. "
